CAMPAIGN DETAILS

App name	Pocket Budget	Package	app.testslot.demo.pocketbudget
Owner	developer@example.com	Campaign status	completed
Plan	starter	Required testing days	14
Tester slots	12 filled / 12	Campaign created	2026-09-27
Report generated	2026-10-23 13:36 UTC	Sessions analysed	660
Observed window	2026-09-28 to 2026-10-11 (13 days)		
Target countries	Any		

TESTING PROGRESS

completed 12 expired 1 failed 1

12 of 14 testers have met the full 14-day requirement · 12 runs credited as completed

APP UPDATES DURING TESTING

Updates logged: 3

3 of 2 recommended

3 of 3 confirmed installed on tester devices

Version 1.0.2 (code 3) - Day 3 CONFIRMED

Confirmed 2026-10-01 · 12 testers seen on this build or newer

Fixed a crash when opening Insights on Android 13.

Version 1.0.3 (code 4) - Day 5 CONFIRMED

Confirmed 2026-10-03 · 12 testers seen on this build or newer

The Save button now stays above the keyboard, and charts load faster.

Version 1.0.4 (code 5) - Day 10 CONFIRMED

Confirmed 2026-10-08 · 12 testers seen on this build or newer

Currency now updates on every tab. New: monthly budget alerts.

BUG REPORTS & FEEDBACK

7 reports from 7 testers · average rating 4.5 / 5

Bw7RkT1pZs5M - Day 2

TECNO CK7n · Android 13 · 1 attachment (see dashboard)

The Save button is hidden behind the keyboard when I add an expense.

SAMPLE

k3VqP8sLr2Xa - Day 3
Samsung SM-A546B · Android 14
Charts take a few seconds to load the first time I open Insights.

Uf8KdS4rJh1C - Day 4 RATED 4/5
itel P661N · Android 13
Would love to set a monthly budget for each category.

Rc1VbH7kLq4E - Day 6 RATED 5/5
OnePlus CPH2493 · Android 14
Fixed in 1.0.3. The keyboard no longer covers the Save button. Thanks!

Hq2LxN6vYc3R - Day 9
Xiaomi 23129RAA4G · Android 14 · 1 attachment (see dashboard)
After switching to EUR, the Summary tab still shows the dollar sign.

Nm6QsD3aWx8P - Day 11 RATED 5/5
Infinix X6833B · Android 13
Smooth on my phone now, no crashes. Budget alerts arrive on time.

Xd2HgQ9mBc5Y - Day 13 RATED 4/5
Realme RMX3636 · Android 14 · 1 attachment (see dashboard)
Dark mode looks great. Small typo on the welcome screen: "recieve".

TESTER CONTINUITY

TestSlot manages tester quality internally without disrupting your Google Play closed test record. When we identify an inactive tester we assign a replacement in our system while the original tester remains opted in on Google Play - so your continuous opted-in count never drops below the required minimum from Google's perspective.

VERIFICATION & METHODOLOGY

Every figure in this report is derived server-side from check-in events recorded by the TestSlot app. A testing day is credited when a tester's device reports the app installed and opened within the 24-hour check-in window (a 2-hour grace period applies). A run is credited as completed after the required number of consecutive credited days; it fails after more than two missed days. Streak counts, timestamps and session records are computed from server time and cannot be edited by testers. Session analytics reflect foreground usage reconstructed on-device from Android UsageStatsManager events. An app update is recorded when the publisher logs the release, and marked confirmed only once a tester device independently reports an installed version code above the highest one seen across the cohort at the time it was logged - a logged release no device has been seen on is never presented as confirmed. Testers are identified by a stable anonymous account ID only - names, emails and any other personal detail are never included in this report. This report reflects live campaign data at the moment of generation.
